

# CMMS SOFTWARE FOR HOTEL AND CATERING

## DIMO Maint uses digital technology to improve management the performance of your maintenance

In an increased competitive environment, hotel establishments and catering professionals seek to increase their profitability (lower cost prices, customer loyalty), to build and maintain a brand image, increase the level of customer satisfaction, coordinate and improve their services in a spirit of continuous search for quality. The quality of your service offer depends on maintaining the premises that welcome your customers and their equipment : heating, green spaces, electricity, furniture, rooms, swimming pools, spa, kitchens, air conditioning, reception rooms, etc.

### Perform

Increase the availability and reliability of your equipment by rigorously monitoring your maintenance plan and anticipating breakdowns.

### Secure

Follow all the interventions that can be planned in advance, especially those connected with quality, safety and regulatory compliance.

### Protect

Control and reduce your electricity/water consumption by regularly monitoring your equipment and infrastructure.

### Save

Well-managed and anticipated maintenance management saves 10-30% in annual maintenance costs.

“

A CMMS project is successful if users are well trained and provide comprehensive and systematic information to the database. It is their tool which is an interface between the field and the administrative site. A true memory of maintenance, the CMMS solution will make it possible to analyze the degree of relevance of the request and the efficiency of the technical team.

**Cayman Group**

”

## DIMO Maint, the CMMS adapted to the needs of the hotel and catering

The DIMO Maint CMMS provides solutions adapted to the constraints of companies operating in the hotel and catering sector :

- **Intervention requests** integrating photo taking, voice dictation, QR code scanning to identify the place or equipment
- Organization of the **schedule** with the assignment of work to technicians and subcontractors and the management of the availability of premises
- Management of interventions in the **mobile application**, with intervention report accessible where you want and when you want, including in places where there is no coverage zone (parking, basement ...)
- Receive **notifications** about interventions in the app directly from your smartphone
- **Insurance of a stock of essential consumables** while avoiding the surplus
- **Fast and error-free inventory maintenance** thanks to the app and QR codes
- **Implementation of preventive maintenance** according to schedule (every month, the 1st Monday of each month ...), meters (every x m3, km, kW ...) and operational conditions (temperature fringe to be maintained in a cold room...)
- **Access to monitoring elements for reporting & dashboard maintenance:** immediate access to the inventory, decision support (repair or replacement equipment) and fault analysis (diagnostics)
